Calibration frequency: 3 months 6 months 12 months Other: _____

All Instrument Must Be Decontaminated OR Sterilized Prior To Shipping or service.

Autoclave Warning: Autoclaving may damage your equipment, please verify with manufacturer specifications for autoclavability.

Standard test points are typically: 100%, 50%, and 10% of the nominal with reads at high, medium, and low unless otherwise specified on the pipette.

NOTE: Please include several tips commonly used in your lab with your pipettes, for validation purposes.

Level One service includes: Each pipette is completely disassembled, cleaned inside & out, pistons are polished & re-greased, and seals &/or O-rings are replaced as needed (as specified by the manufacturer, make, & model) then reassembled. Parts that can wear-out are proactively replaced.

Pipettes undergo a Leakage Test, Functional Test, and Calibration Check are performed with 4x2 weighing.

Each channel of the multichannel pipette is individually adjusted, weighed, and calibrated. Recommended for precise, quantitative work.

Every serviced pipette receives a calibration or verification sticker with a scannable barcode and comprehensive information including the calibration date, next calibration due date, and serial number. Optional information such as user, equipment number and location can also be included on the label.

Level Two service includes: the Level One and detailed **calibration certificates** for each calibrated instruments, outlining the measurement results, uncertainties, and any adjustments made. Our certificates are compliant with international standards ISO/IEC 17025 and can be used as documentation for regulatory compliance and quality management systems.

Other Calibrations:	Pricing	Quantity	
Timers & Stopwatches	\$20		
pH-Measuring Equip. (4,7,10)	\$45		
Analytical Balance	\$100		
Centrifuge	\$120		
Thermometer	\$65
